

# BW-Repair-app

1

# Timeline of a user

Login with Google  
and fill profile  
details.

01

Start to prepare a  
repair request  
with user  
requirement.  
Example : making  
a phone repair  
request.

02

Technician get the  
request and check  
all the aspects  
and raise a price  
for the job.

03

User gets the  
price notification  
and the job will  
start if the user  
select the agree  
button else, the  
order canceled

04

Technician update  
the order status  
as completed  
when the  
repairing is done  
and then user can  
receive the given  
product repaired.

05

# Main Modules

## Front end
